INTRODUCTION

Last Edition	1939.
Present Edition	1946
Projected next Edition	1948

This book is published by the Association of British Chemical Manufacturers, with a view to giving purchasers information as to the products manufactured by members of the Association.

The Association is incorporated under the British Companies Law by licence of the Board of Trade. It is not itself a trading concern and it makes no profit on any business transacted by its members. It does not interfere in any manner with the business arrangements of its members, or discourage in any way their dealing direct or through merchants or other established channels.

All members of the Association are bona fide British manufacturers of chemical products, and every member has declared that he is the actual maker of the products against which his name is shewn. The Association will thoroughly investigate any complaints which may be received in regard to inaccuracies in this respect.

Where intending purchasers have any difficulty in obtaining a particular article, they are requested to communicate immediately with the Association, which will at once make enquiries with a view to providing the information desired.

The letters C and P have been used in connection with those products of which there are commercial and purer grades. Such a distinction cannot be on a standard basis, but must reflect the particular features of the different uses of each product. It is believed, however, that the distinction helps considerably to direct the inquirer to those makers likely to be making the quality he requires.

In the past the Association has issued two directories:—

“British Chemicals and their Manufacturers.”

“Directory of British Fine Chemicals.”

This issue of “British Chemicals and their Manufacturers” incorporates the subject matter of both volumes and it is hoped will be of more service to users.
